

HOLDCOM

MESSAGE-ON-HOLD SYSTEMS

Messenger USB Digital Announcer

Ideal for the tech savvy user that requires immediate program delivery.

Excellence In Sound Quality

The Messenger USB utilizes non-volatile removable USB Flash drive. Playback can range from 8kbps to 128kbps MP3 files.

Digital Reliability

Since the digital circuitry has no moving parts, playback is ultra-reliable. Each Messenger USB is built to exacting quality standards using state-of-the-art assembly equipment for outstanding reliability and years of dependable service.

Maximum Ease of Use

Simply plug a USB flash drive into an available USB port on your computer and the flash drive will show up as a removable drive. Once connected, programs can be added or removed by a simple drag-and-drop, just like you would with a digital camera card or any other type of removable media. No special software is required – just plug and go! Once the files are copied, simply plug the flash drive into the Messenger USB. Changing your Message-On-Hold program is as dragging an emailed file.

Built-in Program Memory Backup

If power to the unit should ever be interrupted, the non-volatile Digital Flash Drive will retain the program. Once power is restored, the Message-On-Hold program will automatically begin playing again.

**Requires a phone system with Music-On-Hold capability.*

**Requires a system with Windows XP and USB capabilities*

SPECIFICATIONS

Sampling Frequency

- 16 - 48 KHz

Bit Rate

- 8kbps – 128kbps

Memory Capacity

- 16 min to 4.27 (varies based on bit rate)
- Larger capacity cards available

Power Supply

- 110VAC 60Hz to 12VDC @ 500mA

Outputs Available

- 2 Mono RCA Jacks: 6V p-p @ 8ohm or 3V p-p @ 600ohm

Loading

- Load to removable USB Flash Drive

Controls

- Power on/off
- Volume

Dimensions

- 1.25 ½ x 4.75 ½ x 4.40 ½ (HWD)

Mounting

- Wall Mountable - Unit can be mounted, recorded and played in a vertical position

Shipping Weight

- 1 lb
